

Constituent selector and Map Layers

Constituent selector: allows the user to choose inorganic or organic constituents and select a specific constituent from the drop down menu within either category. The statistical results for the selected constituent will be displayed on the map.

Showing results for:
 Inorganic Organic
Chloride

The map layers box may be collapsed to display more of the mapped area.

Clicking on an information "i" icon provides descriptions of terms.

Displays Principal Aquifer boundaries

Displays network boundaries

Displays land use

Displays network locations and statistical results.

The 'Basemaps' tab displays various map layers that can be selected as background layers.

MAP LAYERS

- Principal Aquifers *i*
- Network Boundaries *i*
- Land use 2001
- Change in Network Concentrations *i*
